

AcuteNet architecture is based on the principle of protecting patient information through depersonalization and encryption of clinical assessment data. Through Patient-Privacy-Centric design, AcuteNet customers have the benefit of a complete array of Industry Standards and Protocols to meet their business needs from both productivity and value-for-money perspectives. Through AcuteNet architecture design to fully utilize industry standards and protocols, AcuteNet customers fulfill the specific requirements of their jurisdiction for all regulatory compliance requirements at no additional costs or effort.
