

AcuteNet is a sharing economy software as a service capability for healthcare payers and providers enabling the frontline workforce of nurses, clinicians, physicians, personal support workers and administrators to address clinical, regulatory and administrative requirements for patient care in accordance with industry standards.

AcuteNet is used in various patient care setting spanning hospitals, home care, Long term care, community care, pediatric care, palliative care, hospice care and mental health care. AcuteNet customers span government, for-profit, not-for-profit and the insurance sector across 120+ payers and providers in Canada, US and Singapore.

With AcuteNet, the frontline spend their time caring for patient care as opposed to being consumed by technology. This is because AcuteNet is not a typical software application dictating a set of predefined task for user to perform. Rather AcuteNet is a highly visual framework enabling for robust clinical assessments, care plans, quality indicators, cost calculations, regulatory reporting and other requirements through 4 innovations:

**Clinical Assessment Form  
Digitization and Workflow  
Automation**

1

With AcuteNet, digitization and automation of clinical assessment standards and forms such as InterRAI Instruments are delivered rapidly from a couple of weeks to 3 months. Led by our customer requirements and industry standards, we deliver software as a service private cloud solution accessible through any device, anytime and anywhere.

**Private Cloud Computing  
available via any device at all  
times**

2

Our cloud enabled framework eliminates the need for IT infrastructure. We deliver and support digitization and automation through our own secured private cloud infrastructure or within customer's own data center while fully compliant with patient health information privacy requirements.

**Web Service Integration with  
any computing infrastructure  
anywhere**

3

CIOs control AcuteNet as an extension to corporate IT. We accommodate two-way data interchange with any system including single-sign-on. AcuteNet utilizes industry databases such as ICD (International Classification of Diseases), Health Canada Drug Product Database and FDA Drug Database to provide nurses and clinicians with secure and real-time access to list of illnesses and medications needed to deliver the right care to the right patient.

**Multi Layer Encryption at  
application and infrastructure  
level for online and offline use**

4

AcuteNet framework is architected based on the seven principles of Privacy by Design and Security by Kill Chain with multiple layers of encryption providing maximum protection of patient data including offline access when internet is unavailable and flexible reporting.

We drastically reduce costs and deliver superior services through our patient record licensing model. This offers our customers unlimited access and clinical assessments from \$5 to less than a penny per patient per month with full access to industry standards such as InterRAI.
